THANK YOU!

MY LESSONS

TEACHING IS HARD, VERY HARD

ESPECIALLY, WHEN DONE WELL

- Teaching requires us to execute an amalgam of skills, often simultaneously within a constantly changing context.
 - It requires that we spend multitudes of unpaid hours in preparation, grading, and communication.
 - It requires that we persist in the face of challenges, with minimal positive feedback.
 - It requires that we get better at our job over time.
-
-
-
-
-
-
-
-
-
-

WE GOT PROBLEMS

Teachers are leaving the field at high rates

- Between the years 2005-2016, the number of special educators decreased by 17% despite only a 1% decrease in number of students with disabilities (Education Week Research Center, 2018).
 - Between the years 2010-2017, there was a 39% decrease in enrollment in teacher education programs (HECSE, 2021)
 - Covid created more job loss and early retirements (Bureau of Labor Statistics, 2021).
-
-
-
-
-
-
-
-
-
-

SOMETIMES, WE HAVE NOT BEEN PREPARED

TO DO THIS HARD WORK

- Teacher programs vary in quality
 - Barnhill et al., 2014; Conroy et al., 2014; Morningstar & Benitez, 2013
 - May not provide sufficient depth or breadth of content (Knight et al., 2019; Pennington et al., 2021)
 - Often provide training experiences that are in sharp contrast to what they will experience in the classroom
-
-
-
-
-
-
-
-
-
-

TEACHER TRAINING

COMMUNICATION SUPPORTS

- 70% of undergraduate and 60% of graduate programs do not offer courses in communication
- 33% of undergraduates not adequately prepared, 16% graduates
- Focus on behavioral interventions, but more emphasis on knowledge than practice

Teacher Preparation in Communication Instruction for Students With Extensive Support Needs

Robert C. Pennington¹, Virginia L. Walker², and Melissa C. Tapp³

Abstract

In this investigation, we surveyed 51 faculty members who were involved in teacher preparation programs in the area of extensive support needs (ESN) across a range of institutions of higher education. We asked participants to respond to questions related to the quality and quantity of program courses focused on communication instruction and supports for students with ESN. Overall, findings indicated variability in the quality and quantity of teacher preparation-related communication instruction. In addition, participants described barriers related to teacher preparation in this area.

Keywords

communication instruction, extensive support needs, severe disabilities, teacher preparation

One of the most critical functions of education is to prepare students to communicate effectively across a diverse and expanding range of opportunities. Unfortunately, many students with disabilities, especially those with extensive support needs (ESN), often face difficulties acquiring communication competencies sufficient for gaining maximum benefit from their school experience and ultimately achieving high quality of life outcomes (Carter et al., 2012). Students with ESN include the population of students who require special education services under the eligibility category of intellectual disability, autism, and multiple disabilities and, due to their pervasive and significant support needs, are often eligible to take their state's ultimate assessment (Fink et al., 2017). Many of these students present with complex communication needs (Ardick et al., 2018),

with no conventional form of communication, and with whom we argue there should focus students' inability to effectively communicate with others may have constructive and lasting negative effects on their success in multiple areas. Those with ESN and their communication skills may have less access to academic content and high-quality instruction (Krause et al., 2011; Korth et al., 2016). For example, in Canada, 2015, we were likely to receive instruction in restrictive educational settings (Krause et al., 2015) and have fewer opportunities to develop strong peer networks (Fildes et al., 2006; Korth et al., 2016).

SAGE

THEN THE ENVIRONMENT GETS TO WORK ON US

- We receive few reinforcers for effective teaching behavior
 - These teaching behaviors fade over time
 - Especially, when we are isolated
- Less than effective practices are often reinforced
- We are sometimes led astray by less trained and more experienced colleagues

WE LOOK TO IN SERVICE TRAINING

DESPITE THE AVAILABILITY OF EFFECTIVE MODELS

- Often broad with limited follow-up
 - Like this training, Isn't it ironic?
- Out of context
- Sometimes, not evidence-based content

ACCESS TO RESEARCH

- Restricted access
- Literature may not be helpful?
 - Published in behavior or disability specific journals
 - Traditional and separate schools
 - Special education or separate setting
 - Researchers as change agents
 - Limited teacher training

TAPP, PENNINGTON, CLAUSEN, & CARPENTER, IN PRESS

**SOMETIMES, WE CRASH
OR JUST GET STUCK**

WHAT DO WE CALL STUCK EDUCATORS?

- Poor, bad, lazy,.....
- Just doesn't have it, couldn't cut
- Retirement-ready, Kid haters
- Couldn't do anything else so he tried to teach
- Just teaching for a paycheck

ARE WE BEING FAIR?

CONSIDER

- Are our students inherently bad, or just have a few contextually inappropriate or harmful behaviors?
- Do they choose to be “bad” or have they learned that these behaviors “work for them” in the given environment?
- Should we punish our students by withholding compassion?

CIRCULAR REASONING TRAP

A MIRROR

- What if we looked at our own teaching as a collection of behaviors, as we do our students' behavior?
- Teachers behave
 - We plan, teach, provide feedback
- Teacher behaviors collectively comprise a repertoire
 - Sometimes it is insufficient
- We learn what works through interactions with the environment our circumstances

CIRCUMSTANCES

SELECT OUR TEACHING BEHAVIOR

- Teacher often sends student out of the room,
 - Student is disruptive and distraction is removed
- Teacher presents materials unsystematically during intensive instruction
 - Limited training, not taking continuous data from which to identify errors in teaching
- Teacher does not communicate with parents
 - Previous communication attempts have been punished

SHIFT OUR LENS

BEHAVIOR OF EDUCATIONAL PROFESSIONALS

YE OLD ABC'S

Antecedent

Antecedents that evoke expected behaviors
(e.g., bell rings, student behavior, paraprofessional interaction, parent question)

Behavior

Expected Teacher Behavior
(e.g., Provide positive feedback, collaborate with family members, plan effective lessons.....)

Consequence

POTENTIAL REINFORCERS?

- Student progress?
- Compensation?
- Avoid problem behavior?
- Avoid due process?
- Administrator feedback?
- Parent feedback?
- Collegial feedback?
- Consultant feedback?

RESEARCHER/CONSULTANT FEEDBACK AND REINFORCED

AND REINFORCED

DUCHANE ET AL., 2011; RENKE ET AL., 2005; SWIEGERT ET AL., 2015

TAKE A SECOND TO CONSIDER SOMETHING YOU MIGHT LIKE TO CHANGE AND HOW IT MIGHT BE RELATED TO THE ENVIRONMENT?

WE CAN CHANGE

- Intensive instruction (Mason et al., 2017)
- Function-based treatments (DiGennaro et al. 2007)
- Behavior specific praise (Reinke et al, 2007)
- Reading instruction (Brownell et al., 2017)
- Data based decision making (Browder et al., 1987)
-

BUT HOW?

FIGURE OUT WHERE YOU NEED TO GO

- Carefully and honestly consider your programs' strengths and weaknesses
- Invite feedback from trusted colleagues
- Use established quality indicators
- Then take a breath

WHERE ARE YOU?

- Can all students use conventional communication skills to control their access to preferred and non-preferred conditions?
- Do we always use good instructional practices including ensuring when necessary we obtain students' attention, present clear directives, prompt when necessary, and provide feedback?
- Are all students and teaching staff engaged in meaningful instruction throughout the day?
- Do we use function-based approaches to challenging behavior?
- Do we collect and graph data, and use those data to make instructional decisions?
- Is my team functional and efficient?

DEVELOP SOME GOALS

- AND OBJECTIVES**
- All students will have a functional communication system with which to make requests
 - I will use the VB-MAPP to assess beginning communication skills for all non-vocal students
 - I will increase the number of instructional trials on requesting to 50 per day
 - No students will sit for more than 10 minutes without instruction
 - Mr. Frank and Ms. Rodriguez will lead at least one small group per day by September
 - I will provide activity matrices to paraprofessionals depicting their responsibilities at the beginning of each day.

MEASURE TEACHER BEHAVIOR?

YES!

- Changes in number
 - Rate
 - Rate of positive teacher feedback
- Percent
 - Of intervals with teacher feedback
 - Percent of intervals with paraprofessionals engaged in instruction

MEASURE TEACHER BEHAVIOR?

YES!

- Procedural fidelity
 - Of course, collecting data on the accurate implementation of a procedures

Phase 1 Participant Responses		
Pre-Session	Trial 1	Trial 2
1. Has training materials ready (binder, pictures of preferred items, preferred items).		
2. Has data sheet and writing utensil ready.		
3. Ensures preferred items are out of participant's reach.		
4. Selects items for training that have been previously identified as preferred in a stimulus preference assessment.		
5. Ensures items are prepared by giving free access to training items before the 1st trial with that item.		
Session		
6. Places ONE picture that corresponds to ONE preferred item in hand on the table directly in front of the participant.		
7. Presents item to the participant, but out of his or her reach.		
8. Uses different item after every 5 trials or less.		
9. Uses three-second pauses if cellitis are used.		
10. Waits 1-2 s for the participant to respond.		
11. If the participant does not reach for the picture, gives general (i.e., verbal prompt) and waits 1-2 s for a response.		
12. If the participant does not reach for the picture after general prompt, uses physical prompt (i.e., hand over hand) prompt.		
13. Once the participant has the picture in hand, waits for him/her to reach out, then opens one hand and returns picture.		
14. Does not take the picture from the participant.		
15. Does not provide verbal rewards at any time.		
16. When a correct response is emitted, provides appropriate reinforcement (i.e., praise and access to item).		
17. Provides reinforcement on EVERY trial, regardless if prompting was required.		
18. Gives access to preferred item for approximately 15-20 s OR until participant has consumed item in its entirety.		
19. Correctly scores responses on data sheet immediately after each trial is complete.		
20. Returns picture to table (or binder) while the participant plays with or consumes item.		
TOTAL SCORE		
	Rosales et al., 2009	

GET YOUR VILLAGE

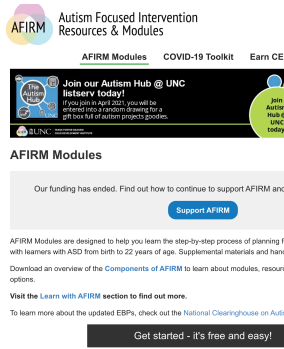

AGAIN, DON'T GO IT ALONE

- In your building, with whom do you share your successes?
- Gather other teachers, related service personnel, district supports, paraprofessionals, parents.
- Data suggest peer coaching works (Showers & Joyce, 1996).
 - Peers can provide instruction, prompts, strong feedback contingencies.
- Provide and embrace opportunities to be observed and receive feedback.

CHANGE YOUR ENVIRONMENT

GET TRAINING

- Seek out high quality training around evidence based practices
- Find a professional development co-conspirator
- Chunk and practice

The screenshot shows the AFIRM website header with navigation links for 'AFIRM Modules', 'COVID-19 Toolkit', and 'Earn CE'. A prominent banner reads 'Join our Autism Hub @ UNC' with a deadline of 'Friday, April 30, 2021'. Below the banner, the 'AFIRM Modules' section is visible, including a 'Support AFIRM' button and a 'Get started - it's free and easy!' call to action.

BST

REHEARSE

- Alone, rehearsal is not a strong behavior change procedure (Ward-Horner & Sturme, 2012)
- Feedback is essential
- Rehearse until a criterion of 90-100% is reached

BST

FEEDBACK

- Should be provided during rehearsal and delivered immediately after a rehearsal opportunity
- Be specific
- Don't forget this can be difficult, so be positive in tone and content
- "Here is what you can improve"

Guidelines for Using Behavioral Skills Training to Provide Teacher Support

Florence D. DiGenaro Reed, Abigail L. Blackman, Tyler G. Erath, Derys Brand, and Matthew D. Novak

CHANGE YOUR ENVIRONMENT

USE PROMPTS

- Scripted curricula
- Fidelity checklists
- Embedding prompts within texts
 - Hardy, Pennington et al., 2020
- Haptic timers (e.g., MotivAider)

Level 1	<p>Look back</p>	NS Verbal "Look back in the text". Re-read Wait time. Repeat the question.
Level 2	<p>Look here</p> <p>Hi, I got a question about the answer. It's on the next page! Love you both!</p>	Direct Verbal "Let's see if the answer is in this section." Point and reread. Repeat the question.
Level 3		Model Silently point to the answer. Repeat the question.

EXAMPLE 1: KALIS, VANNEST, & PARKER

- Targeted teachers use of praise during scripted lessons
 - Presented teacher a daily goal
 - Teacher used hand held counter to count praise statements
 - Reviewed with researcher/coach after session
 - Responding maintained

EXAMPLE 2: BROWDER ET AL., 1986

- Implemented a training on data-based decision making
 - Taught self evaluation of trends (Split middle technique)
 - Self recording of decisions
 - Supervisor reviewed data independently and did not provide feedback

BRINGING IT BACK

- There no bad educators, just ineffective/harmful behaviors or practices
- If the environment selects these behaviors/practice then it should be changed
- It might take a small committed and objective army to change an environment
- We should make small changes and monitor our progress

THANK YOU!
ROBERT.PENNINGTON@UNCC.EDU
